Re.: Corrosion Innovations – Use of salt cleaners and corrosion inhibitors with Jotun products

To Whom It May Concern,

Jotun Paints Inc. does not promote or prohibit the use of salt cleaners or corrosion inhibitors during the surface preparation of carbon steel surfaces.

We have tested the use of these types of products with our organic linings and atmospheric systems and found no negative effects on the adhesion. There were also no negative effects on the overall performance.

Included product brands are HoldTight, Chlor*Rid, Corr-Ze and SP8.

Please note that it is at the owner's discretion on whether they approve the use of such products.

Please contact Jotun technical support if you have any questions.

Best regards,

Samuel Vierck
