

PRESS RELEASE – FOR IMMEDIATE PUBLICATION

**KTA-Tator, Inc. Named Exclusive Authorized
Calibration Laboratory for LaMotte DC 1500 Colorimeters**

The KTA-Tator, Inc. (KTA) calibration laboratory (Pittsburgh, PA, USA) has been selected by LaMotte Chemical Products Company and Milliken & Company (supplier of CHLOR*RID and CHLOR*TEST products) as the sole provider of calibration services for their LaMotte DC 1500 Colorimeters used for soluble salts detection. LaMotte recommends an annual calibration of the meters, which is also required by inspection firms.

The DC 1500 meters are a component to the CHLOR*TEST CSN kits and are used to detect sulfate contamination levels prior to coating work.

KTA performs same-day calibrations and issues a Certificate of Calibration with all meters.

KTA's Instrument Sales and Service Department's laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (Cert# 2455.02).
