Soluble Salts Cleaners

Carboline recognizes the need and use of industrial cleaners for the removal of soluble salts. We have long approved their use in atmospheric coatings and organic coatings and have continued to evaluate their expanded use.

Carboline has tested the use of numerous brands of soluble salt surface treatments with a variety of organic coating systems. The testing consisted of immersion service in different commodities. Upon conclusion of our testing, we have seen no positive or negative effects on the performance of organic coatings in immersion service. As a result, the owner or applicator can decide if they want to utilize a surface treatment product.

The manufacturers treatments tested include: Chlor-Rid, Holdtight, Corrosion Exchange, Borchers, and Corr-Ze.
